

LinuxPrint Template:

24” x 36” Metal A Frame Sandwich Board

Print Specifications

- The board dimensions are 24” x 36” and the **printable area** is outlined with the black dotted cut line.
- **0.25” Bleed** all around if graphics extending to and beyond the edges (submitted file should be 24.5” x 36.5” - where the extra bleed portions will not be visible on the final piece)

Note that this is highlighted in a faint Red on this template. This is the area where any desired elements which are meant to reach the edges of the sandwich board should bleed onto.

- **2” Safety margin** is recommended (i.e. any content you don't wish to have cut off should be 2” from all sides), Please note that albeit a margin of 2” is recommended, a 0.75” margin is absolutely critical and mandatory due to the metal frame hiding any content in that region.

36” height

24” width
